OLAWALE DAYO IBRAHIM

Fullstack Developer (React + Node.js) | Lagos, Nigeria
temidayo.tech | github.com/dayo-frontdev | linkedin.com/in/olawale-dayo-201919368

PROFILE

Computer Science student and fullstack developer. I build responsive React and TypeScript interfaces and Node.js and PostgreSQL APIs. I have worked as a frontend developer on a healthcare emergency-department application in a team, and I am now building my first project on my own, based on interviews with real small-business owners.

TECHNICAL SKILLS

Frontend	React, TypeScript, JavaScript, HTML, CSS/SCSS, Tailwind CSS, shadcn/ui, TanStack Query, React Router
Backend	Node.js, Express, REST APIs, WebSockets, Zod, JWT (access and refresh tokens), bcrypt
Databases	PostgreSQL, Drizzle ORM, MongoDB, Redis
Tools and DevOps	Git, GitHub, GitHub Actions, Postman, Docker, Linux, Vim, nginx, PM2, DigitalOcean (VPS), Vercel, Netlify, Railway
Other	Figma, Jest, Vitest, basic Python, basic system design and deployment

EXPERIENCE

PN Africa | Frontend Developer, 10-Week Team Cohort Lagos, Nigeria

- Built the frontend of **Emergency Department**, a role-based hospital workflow app for admins, doctors and nurses, meant to replace paper file systems in teaching hospitals.
- Turned product requirements and Figma designs into responsive React interfaces for all three role workflows.
- Integrated REST and WebSocket endpoints for authentication, patient queues and live updates. Implemented protected routes, session handling and TanStack Query data flows.
- Worked with the backend team on an offline-first security design: sensitive data is encrypted with a public key before local storage and decrypted only on the server. Identified the trade-off this creates for reading records offline.
- Fixed a cross-domain refresh-token cookie problem (Vercel frontend, Railway backend) with a reverse-proxy rewrite.
- Presented the product to stakeholders and explained its value beyond the implementation.

SELECTED PROJECTS

RSV: Appointment Booking Platform In development

React, TypeScript, Node.js, PostgreSQL, Drizzle ORM, Redis

- Freemium booking tool for small WhatsApp-based service businesses in Nigeria. Owners set services and availability and share a booking link, and clients book from open slots.
- Interviewed real barbers and spa owners and studied their WhatsApp booking workflows to shape the product.
- Built registration and login with short-lived access tokens and rotating refresh tokens (hashed in the database, sent as an httpOnly cookie, expired tokens cleaned up on a schedule).
- Designed the PostgreSQL schema: weekly availability with pre-generated slots, service and price snapshots taken at booking time, and shared addresses using an exclusive-arc constraint.
- Planned a Redis cache for each owner's recent-bookings feed, paired with TanStack Query on the client.

Habit Tracker API

Node.js, Express, TypeScript, PostgreSQL, Drizzle, Zod, JWT, Docker

- REST API with CRUD operations, PostgreSQL storage, Zod validation, JWT authentication and bcrypt password hashing. Database runs in Docker.

EDUCATION

National Open University of Nigeria | B.Sc. Computer Science 2024 to 2027 (expected)

Coursework: Database Systems, Microprocessors, Operations Research, Net-Centric Computing.

CERTIFICATIONS

- **Frontend Masters:** API Design in Node.js v5, Intro to Node.js v3, VIM Fundamentals (2026). Intro to Databases, Intro to Linux and the Command-Line, Intro to React v9, Full Stack for Front-End Engineers v3 (2025).
- **Test Automation University:** Jest JavaScript Testing Framework (2025).
